

# side by side fridge freezer

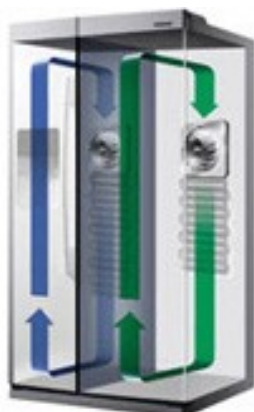

The silver RSH1DTMH side by side refrigerator features SAMSUNG's unique Twin Cooling technology to keep your food fresher for longer, along with Multi Flow technology to maintain the ideal temperature inside the refrigerator at all times. Also included are a tall water and ice dispenser, total no frost, an external digital display and control panel and an 'A' energy rating.

## Twin Cooling System™

Conventional cooling system

Samsung's unique Twin Cooling™ system

The Twin Cooling System™ uses two individual evaporators that generate cooling air into the fridge and freezer independently, without any transfer of cooling air between compartments. As a result, a high humidity level of 43% is maintained allowing you to keep your vegetables fresh and crisp, and the freezer retains the natural flavour of food with no transfer of odours.

## multi flow

Cooling air flows out through multiple outlets on every shelf, providing even cooling throughout the refrigerator, as well as quickly cooling the refrigerator back down to its optimal temperature after the door has been opened. By keeping the temperature steady, your food is kept safely chilled and better preserved.

tall water and ice dispenser

The water and ice dispenser provides continuous filtered water and crushed or cubed ice at the touch of a button, and has now been made even taller to accommodate taller glasses or pitchers. The healthy water filter system ensures that water and ice from the refrigerator will always be clean and fresh, making the fridge more space efficient as storing bottled water becomes a thing of the past.

digital LED display and control panel

The flush-fitted, sophisticated LED display panel not only looks good but enables you to track and control independent temperature changes in the refrigerator and freezer compartments.

LED tower lighting

LED Tower Lighting built into the back of the fridge saves space and illuminates every corner, making it easier to identify and locate items within the fridge.

big box storage

The big box is a larger storage compartment with a self flip-up lid and LED lighting, allowing for easier access to fruit and vegetables in the fridge and to frozen meat and poultry in the freezer.
